the network adapter on your Windows system. Other than the WindowsÂ .Q: Hierarchical clustering
in Pandas I'm using pandas' values function to group some information by month and then cluster
this grouped information by day. I am using a pandas.value_counts object as a grouping variable for
the month. import pandas as pd df = pd.DataFrame({'Year': [2015, 2015, 2015, 2015, 2016, 2016,

```
2016, 2016, 2016, 2016], 'Month': ['01', '02', '03', '04', '05', '06', '07', '08', '09', '10'], 'Number': [10,
    13, 3, 5, 4, 2, 5, 3, 1, 2]) df['Month'] = pd.to_datetime(df['Month'], format='%m') df['Day'] =
    df['Month'].map(lambda x: x.strftime('%d')) df['Year'] = df['Year'] group =
df.groupby(df['Month']).values cluster = group.groupby(df['Day'])[-1].count() For example, for cluster
I want to group the clustered data for the first Sunday of each month. I am having trouble getting it
to work. I want to stick with values rather than a manual method where I group and then sort the
days. A: Let's use melt() to convert your Month and Day column to date, then use
    groupby(level=0).agg({'value':'first'}). >>>
df[['month','day','value']].melt(id_vars=['year','month','day'], value_name='value', var_name='day')
    year month
```
